#### DETAILED ACTION

#### Election

In view of applicant's argument, the requirement for election of species is hereby withdrawn.

Claims 4, 6, 8-15, 23-27 are presented for examination on the merits.

In view of the amended claims and applicant's arguments, the rejection under 35 USC § 112 second paragraph is hereby withdrawn.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4, 9, 14, 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Chiang et al. (The J of Clin. Endo. & Metabolism 2000;85(10):3828-3839).

Chiang teaches a method for modulating senescent human cell (granulose-luteal cells, see title and abstract) by administering an effective amount of an inhibitor of adenylate cyclase (page 3831, right column, 1<sup>st</sup> full paragraph, and page 3833, Fig. 6), an inhibitor of protein kinase A (page 3831,

Art Unit: 1657

right column,  $1^{st}$  full paragraph), an inhibitor of protein kinase C (page 3831, right column,  $1^{st}$  full paragraph).

Therefore, the cited reference is deemed to anticipate the instant claims above.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, 6, 8-15, 23-27 are rejected under 35 U.S.C.

103(a) as being unpatentable over the combination of Chiang in view of Chaves et al. (Gerontology 2002;48:354-359).

Chiang teaches what is above.

Chiang does not teach that the human cell is fibroblast, and the specific inhibitors in claims 10-13, 24-27.

Chaves teaches a correlation between PKC activity and aging (see title, abstract and Table 3 on page 358).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the method of Chiang to modulate cellular senescence in human fibroblast because Chaves teaches a correlation between PKC inhibition and aging (page 358, right column, 2<sup>nd</sup> full paragraph). One would have been motivated to make the modification because it is important to understand and modulate the aging process (Chaves,

Application/Control Number: 10/517,269

Art Unit: 1657

page 359, right column, lines 1-2) and Chiang et al. specifically described the effects of protein kinase A/C inhibitors and adenylate cyclase inhibitors on human cells and Chaves correlates protein kinase C activity with aging, and would reasonably have expected success in view of both Chiang and Chaves's teachings. The choice of particular type of human cell, particular compound as inhibitors (e.g., claimed in claimes 10-13, 24-27) is deemed merely a matter of judicious selection and routine optimization which is well within the purview of the skilled artisan having the cited reference before him/her.

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

### Conclusion

No claim is allowed.

Certain papers related to this application may be submitted to Art Unit 1657 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone number for the Group is 571-273-8300. NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the

Art Unit: 1657

processing of duplicate papers in the Office.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the The USPTO's Patent Electronic problem has been corrected. Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

Any inquiry concerning rejections or objections in this communication or earlier communications from the examiner should be directed to Bin Shen, Ph.D., whose telephone number is (571) 272-9040. The examiner can normally be reached on Monday through Friday, from about 9:00 AM to about 5:30 PM. A phone

Application/Control Number: 10/517,269 Page 6

Art Unit: 1657

message left at this number will be responded to as soon as possible (i.e., shortly after the examiner returns to her office).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Jon Weber can be reached at (571) 272-0925.
